

## Synthetic Monitoring (SyM)

Synthetic Monitoring is a must-have tool for companies that want to provide a smooth and reliable digital experience for their customers. With Synthetic Monitoring, you can continuously monitor the uptime and performance of your website & applications from the end-user perspective and identify problems before they cause downtime.

*Do you always know the status of your applications and services? Synthetic Monitoring does!*

### Your Benefit

- Early detection of problems
- Guarantee of availability
- Identification of bottlenecks
- Monitoring of SLAs
- Avoidance of false alarms
- Enhanced customer satisfaction
